The following tables show 1986 characteristics of All Sibling pairs by attrition status in 1999 and 2007

Tables referenced in Footnote #9 in Fitzgerald 2010
The left segment of table 2A is table 5A in Fitzgerald 2010

Each observation represents a sibling pair
Weighted by 1968 individual weight of older sib.
For correlations: goodhealth is good/excellent health on 5 point scale; Labor Income is average over age 25-34; Education is years of education at age 24.

The following tables show 1986 characteristics of Male Sibling pairs by attrition status in 1999 and 2007

Tables referenced in Footnote #9 in Fitzgerald 2010
The left segment of table 2M is table 5B in Fitzgerald 2010

Each observation represents a sibling pair
Weighted by 1968 individual weight of older sib.
For correlations: goodhealth is good/excellent health on 5 point scale; Labor Income is average over age 25-34; Education is years of education at age 24.
For correlations: Robust standard error in parentheses. Asterisks indicate significantly different from zero (*=.1, **=.05, ***=.01)

Table 1M: 1986 characteristics by attrition status for Male Sib Pairs if in 1999
Sample: Adults 18-34 in 1968 who were sample children 0-16 in 1968
Current table for 1986 characteristics by in or out in 99, where out is for reason other than death by 1986 because it is based on whylnr for 1986.
