Homing Experiment with Leach's Storm-Petrels

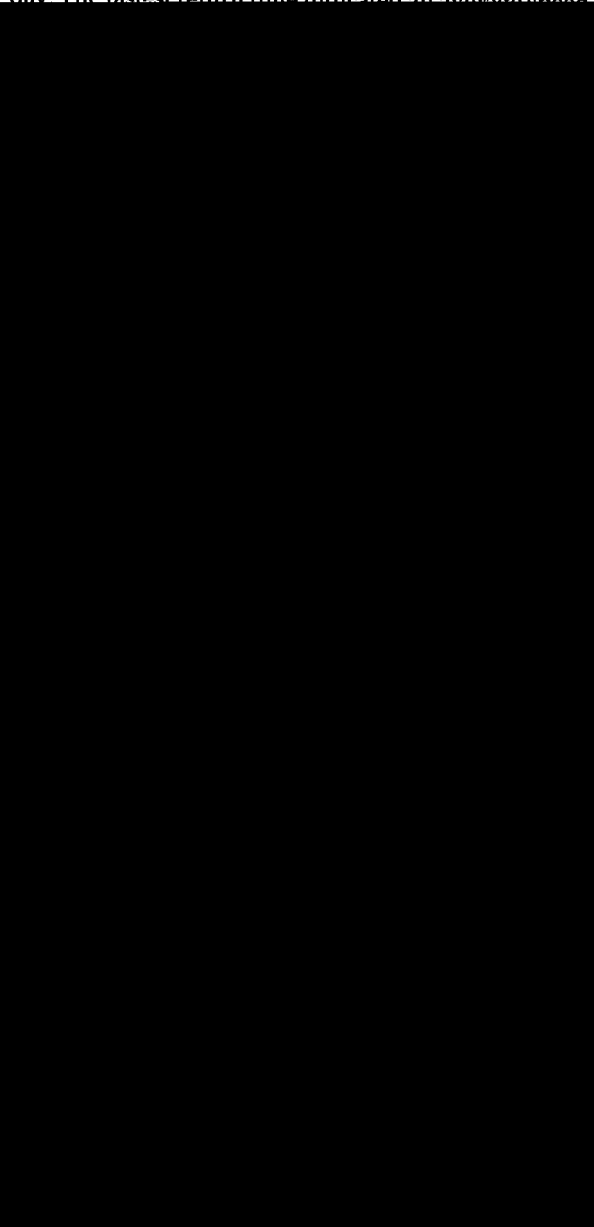

ELIZABETH CARY PIERSON,¹ CHARLES E. HUNTINGTON,² AND NATHANIEL T. WHEELWRIGHT
College, Brunswick, Maine 04011 USA

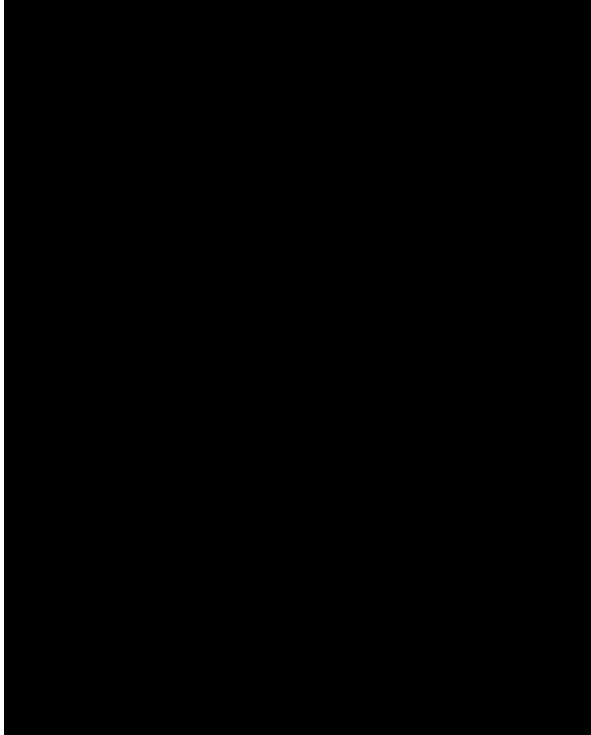

of 4 July 1974, within 15 h of being removed from their burrows. The birds were observed at the

day. The fastest return time indicated an average speed

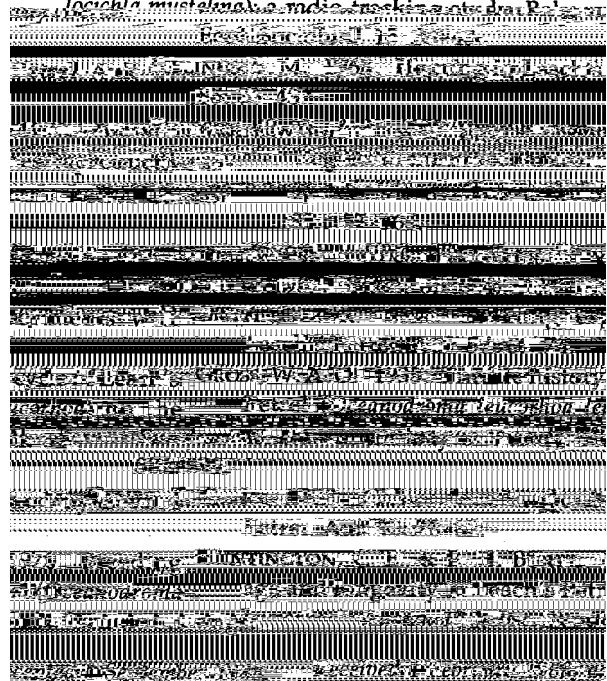

homing abilities; most birds returned relatively rapidly after being displaced more than 800 km from

gration, orientation, and navigation (S. A. Gauthreaux Jr., Ed.). New York, Academic Press.
